# 8867

Data sheet

Robust analyser for safe and hazardous areas with integral dilution port.

### Combustibles Analyser

based on catalytic combustion system

The 8867 provides accurate in line analysis of flue gas and other gases with Oxygen deficiency in order to determine the total concentration of combustible gases in the sample stream (typically expressed as CO,  $CH_4$  or  $H_2$  in accordance to the most representative component).

The air dilution port, combined with the ADEV special dilution system can ensure a perfect measure even in case of Oxygen deficiency (that is the most dangerous condition).

Fully proved technology, widely used in Iron & Steel plants and petrochemical plants.

### **Technical Specification**

### 8867 Total Combustibles Analyser

#### Performance Specification

| Accuracy                | ± 4% of span (output signal).  |  |  |  |  |
|-------------------------|--|--|--|--|--|
| Repeatability           | ± 0.5% of span (short term).   |  |  |  |  |
| Reproducibility         | 24 hours: ± 1% of span.  |  |  |  |  |
| Linearity               | Better than ± 1% of full scale   |  |  |  |  |
| Response Time           | Initial: < 1 sec.; 90% of step-change: < 10 sec.<br>(with max. 2000 cc/min. flow rate) |  |  |  |  |
| Drift                   | Zero: max. ± 2% of span per week<br>Span: max ± 1% of span per week (without autocal)  |  |  |  |  |
| Ambient Temp. Influence | Better than ± 1% of full scale on the entire temperature range                         |  |  |  |  |
| Atm. Pressure Influence | ± 0.015% of reading per hPa  |  |  |  |  |
| Flow Rate Influence     | The ratio between dilution air flow rate and sample flow rate must be constant         |  |  |  |  |
| Line Voltage Influence  | max. 0.02% of span, for each 1% change of voltage.                                     |  |  |  |  |

#### **Operative Specification**

| Sample Flow Rate                         | with 0-5% range:<br>with 0-10% range:  | 1000 cc/min.<br>500 cc/min.  |  |  |  |  |
|--|--|------------------------------|--|--|--|--|
| Dilution Air Flow Rate                   | with 0-5% range:<br>with 0-10% range:  | 1000 cc/min.<br>1500 cc/min. |  |  |  |  |
| Total flow rate (sample + dilution air): | 1000 ÷ 2000 cc/min.  |                              |  |  |  |  |
| Sample Pressure                          | 3000 Pa minimum (with filter and flow meter).  |                              |  |  |  |  |
| Range                                    | Refer to ordering information  |                              |  |  |  |  |
| Output                                   | non-normalized output current that functions as input of the selected ADEV control unit                              |                              |  |  |  |  |
| Relative Humidity                        | 90% maximum.   |                              |  |  |  |  |
| Operation Temperature                    | -10 ÷ +50°C (14 to 122 °F).  |                              |  |  |  |  |
| Temperature controlled                   | at 50°C  |                              |  |  |  |  |
| Storage Temperature                      | +70°C (158 °F) max.  |                              |  |  |  |  |
| Power Requirements                       | 24 ÷ 30 Vdc, 45 VA from dedicated power supplier.  |                              |  |  |  |  |
| Pneumatic Connections                    | ¼" or 6 mm OD tubing (compression fittings supplied)   |                              |  |  |  |  |
| Wiring Connections                       | General purpose: 2 openings for G 3/8" (PG 13 cable grip). Ex-Proof: 2 openings for GK 1/2" (cable grip or conduit). |                              |  |  |  |  |

#### **Key Applications**

- Iron & Steel Plants
- Petrochemical Plants
- Combustibles monitoring in every type of furnace, oven and tank

#### Sampling System

8867 needs an external sampling system able to deliver an almost clean sample gas to the analyser at the proper temperature, pressure and flow rate.

ADEV can provide the 8867 analyser combined with a very specific sample and condition system designed to have an Air / sample gas mixture severely guaranteed as constant and, consequently, to get the measure even in case of Oxygen deficiency in the sample (condition that

is often linked to an high presence of combustibles). Contact ADEV for details

Analyser, sampling and dilution for Zone 1 (ATEX)

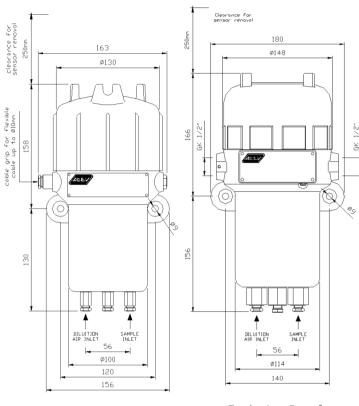

Analyser and dilution system (safe area)

#### **Physical Specification**

| Wet Parts Materials | 316SS, 303SS, Platinum, Alumina, Viton (Buna, others)   |
|---------------------|---|
| Dimensions          | $150 \times 150 \times 290$ mm (general purpose ) $180 \times 155 \times 325$ mm (explosion proof ) |
| Weight              | 7 kg in general purpose housing<br>8,5 Kg. in explosion proof housing                               |
| Finish              | Epoxy grey textured enamel  |
| Protection          | IP 65 (watertight and dust tight)   |

#### **Outline Dimensions**

General Purpose

**Explosion Proof** 

#### **High Accuracy**

The 8867 is an high accuracy analyzer with the inner sensing unit is temperature controlled in order to be completely insensitive to ambient temperature variations.

#### **ATEX**

ATEX certification for Zone 1 / Zone 21. Protection mode:

II 2 G D

Ex db IIC T6 Gb Ex tb IIIC T85°C Db IP65

#### Certificates

ATEX Certificate Number CESI 03 ATEX 130

#### **European Compliance**

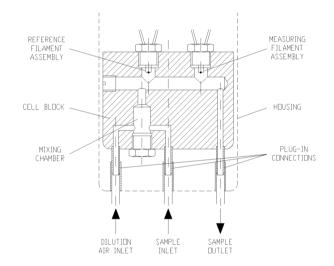

- Complies with Low Voltage Directive 2014/35/EU
- Complies with EMC Directive 2014/30/EU
- Complies with Directive ATEX 2014/34/EU

#### Cell Assembly

The measurement is based on a Wheatstone bridge unbalance resulting from the heat produced from oxidation of the measured gases by catalytic combustion.

A flow of dilution air is provided together with the process gas through the sensing unit.

The combustion takes place on the catalytically coated measuring filament (the active arm of the bridge). The other active arm is identical to the first one but without catalytic properties. Both the arms are identically influenced by flow rate, pressure, temperature and background variations.

#### Very Easy Maintenance

Modular construction makes maintenance extremely easy. It's enough to unscrew the cap of the housing to have access to inner sensing unit that can be removed only by disconnecting 3 wires and unscrewing 2 screws.
